

The Studio's Own Clock

time is not a margin item the margin prints: it is the studio's own clock.

margin-groups.ts:11-13 · 11 September 2026

TABLE — project_time_entries	ENG-DAYS, 8 WAVES

TODAY	Capture inside a document is the best thing in the product — and the hour it writes prices at \$0 or NULL on the commonest project kind, a new hire's hours are stranded money no later agreement can promote, and three of the four views exist in the database and in no click path.
THE SHAPE	One server-owned answer for rate and billable on every path; one sheet with one admin-gated lens for all four views; one new door per surface and a date field; and a CSV.
THE ASK	Forty rulings, four of which must be ruled before the plan can be sequenced — HT-1 gates W1's first line; HT-10 and HT-37 gate W2; HT-4 gates W7 and W1's backfill — and three consent rulings that decide whether the first hire trusts the clock.

Six cells. Two pass outright.

KODY’S REQUIREMENT	TODAY	WHAT THE ROW ACTUALLY HOLDS	EVIDENCE
Log an hour anywhere	0 taps in a document, impossible off one	Zero taps inside an open document; impossible off one, on the phone with nothing held, and in Patina Field for anything but a just-closed visit	log-strip.tsx:11-12 · document-time-provider.tsx:410-413 · V4VisitReviewScreen.swift:308-316
Who		user_id NOT NULL on every row, on every path	00177:13-25
What the work was		NULL on the zero-tap path, 'design' whenever the strip is touched — the column lies either way	document-time-provider.tsx:283-290 · log-strip.tsx:36
Project		NOT NULL — and that is also why admin and studio time has no legal home	00177:14-15 · hours-ledger.tsx:275
Rate		Whatever the browser says — and no browser says anything. Lands NULL, then \$0; the precedence chain below it has no writer	00578:2648-2653 · use-time-tracking.ts:286-299 · 00412:2676-2682

THE ONE THING TO PROTECT

The in-document path, unanimous across five seats: the entry is written before the strip appears and persists if ignored.

THE EMPTY COLUMN

No hours capability in the admin portal, and none proposed; the client portal keeps one read-only, unbroken-down invoice line.

THE READ ALREADY EXISTS

time_entries_studio_read grants every active non-guest co-member SELECT on every studio entry (00316:237-240, active/role test in is_studio_comember at 00556:51) — only the UI hides it.

Interactions per capture path. A <select> counts as two.

PATH	ACTION	TODAY	V1	WHERE THE COUNT COMES FROM
Web desk — in a document	log the time just spent	0	0	Unanimous, five seats. Protect it; spend the friction budget off-document
Web desk — adjust before it is money	nudge minutes, set activity	4	4	CR 4, FS 3 — CR’s unit adopted; v1 adds a static rate and amount readout, no tap
Web desk — nothing in hand	log 45 min of call time	8	5	8 convergent across CR §3 / WEB §3 / FS §3. v1 is 5, not 3: the NL parser is a later S
Web desk — yesterday’s hour	backdate	impossible	+1 field	FS-11, WEB-2 only. The cheapest high-value item in the program
Web mobile — document held	manual entry	≥6	3	CR §3: the clock doorway appears only after a minute accrues, and leaving fires a second offer to dismiss
Web mobile — nothing held	manual entry	accepts input, saves nothing	3	CR-1, FS-24, WEB-3. The requirement failing on the surface she actually holds
Field — visit just closed	log the visit	1	1	The fastest path in the product. Extend with a stepper and a billable toggle, never replace
Field — anything else	a drive, a call, admin	impossible	3	MOB §3 adopted; VET / LEAH say 2 from the companion — the same sheet, a different door
Field — companion strip	reach the sheet while idle	impossible	3	MOB-11 binding: the collapsed strip carries one action and it is “End visit” (Invariant V)
Widget / App Intent	log from the	impossible	not in v1	FS-31 blocks the capability, not the count: the drainer

PATH	ACTION	TODAY	V1	WHERE THE COUNT COMES FROM
	home screen or by voice			runs once per launch and Capture has no background task

Four money holes — two are rate holes, both confirmed against the head classifier body.

HOLE	WHAT IT IS	WHO IS EXPOSED	LINE	FIX	PROVENANCE
1	The rate a non-services project bills at is whatever the browser says — and no browser says anything. The row lands authorized with rated_amount_cents NULL, then \$0. The precedence chain under it is theatre: profiles.default_hourly_rate_cents has no writer anywhere.	Every project that is not design_services / design_build — the commonest kind. A member may also write their own rate, amount and billing state.	guard early-exit 00412 :2356 -2366 . head branch 00578 :2648 -2653 . no rate sent: use-time-tracking.ts:286 -299 . dead leg 00412 :2676 -2682	W1 HT-1, HT-2	Re-verified 00578:2599-2805; not refuted, worse on inspection
2	A new hire's hours are permanently stranded money. No exact-one role match nulls the authority ids, the rate and the amount; the	The studio's first hire, on every services project carrying a default two-role rate card. Also: anyone holding two roster roles, and any hour before an authority covers started_at.	NULL landing 00578 :2765 -2771 . promotion filter 00577 :2493 -2496 .	W1 + backfill cause removed W7 HT-3, HT-4	Re-verified 00578:2599-2805; not refuted, worse on inspection

HOLE	WHAT IT IS	WHO IS EXPOSED	LINE	FIX	PROVENANCE
	addendum promotion loop requires both to be NOT NULL, so a later signed agreement never promotes them. The shipped default label "Principal designer" can never normalize- match lead_desig ner.		role match 00412 :2510 -2546 . defau lt label servi ce- agree ment- draft ing- room. tsx:2 38 . enum 00084 :163- 164		
3	The invoice claim is not atomic, and its rollback un-bills the whole invoice: a partial-claim conflict detaches every entry the invoice already carried.	Any studio drawing a second invoice against the same project	use- time- track ing.ts s:604 -621	W0 HT-5	Verified in source during synthesi s (use- time- tracking .ts:604- 621)
4	The studio's unbilled balance silently understates: the view is declared security_i nvoker = true, so the caller's own profiles	Any studio using roster vendors or an outside bookkeeper	secur ity_i nvoke r 00412 :2672 . INNER JOIN 00412 :2683 -2685 . docum	W0 HT-6	view + consumer verified (invoice - composer .tsx:611 -616)

HOLE	WHAT IT IS	WHO IS EXPOSED	LINE	FIX	PROVENANCE
	RLS applies to its join, dropping any entry logged by a roster vendor or bookkeeper the caller cannot see under that RLS. And the rate printed beside the amount did not price the line.		ented hazar d 00555 :3024 -3026 . rate/ amoun t split 00412 :2674 -2681		

One sheet, one admin-gated scope lens.

No page, no tab bar, no second surface.

SCOPE	THE DOOR	WHO OPENS IT	WHAT CHANGES	TOTALS	NEVER
My hours	Default scope; lens absent for non-admins. /desk? book=hours, g h, %K	Every active member, own rows	Adds rate + rate_source and the billing state	Today, week, billable % in minutes	Not a timesheet to submit. No streak, target or utilisation score
A member's hours	Entered from the person in the People Room — not a staff picker inside a money ledger	owner / admin, asserted by is_org_admin_or_owner	The member's name as the leftmost fact	Their week, billable split, unbilled	Aggregate by default; free-text notes only behind an explicit detail act. No leaderboard
A project's hours	The ? projectId= lens that already exists — with the user_id AND removed	Rostered project members or studio co-members; admins regardless	Name, plus the shipped role→rate authority band	Project total, billable %, unbilled with "Bill it"; the ceiling as a sentence	No burn-down, no progress bar, no red/green. No hours-vs-estimate until the two estimate columns reconcile
The studio's hours	Terminal lens position; the CSV	owner / admin only	Name and project; internal rows in an explicit	Hours, billable minutes, and billable	Not a dashboard: no tiles, sparkline, bar chart,

SCOPE	THE DOOR	WHO OPENS IT	WHAT CHANGES	TOTALS	NEVER

--	-----------------------	-----------------------	-----------------------	-----------------------	-----------------------	-----------------------	---	---

needed either way — HT-10 de-cides whether to narrow it

OPEN QUESTION

is_org_admin_or_owner’s first argument is an organization id (00484:604-609); no source names how a project_time_entries policy derives it — projects.studio_id is forbidden as a policy key (architecture.md:22) and the view’s studio_id is marked not a policy key (architecture.md:289). See HT-10.

The server owns the rate on every branch. Nobody edits an entry’s rate.

PROJECT KIND	RESOLUTION ORDER TODAY	PROPOSED ORDER	WHO EDITS, WHERE
design_services, design_build	Authority rate via exact-one normalize-match of a free-text role label against the roster enum → else NULL + pending_authorization, stranded for ever	Authority rate bound to a person or roster role → studio_member_rates (visible cost, still pending_authorization) → none	The rate card inside the signed agreement — contractual, immutable per version, unchanged (part-editor.tsx:423)
Every other kind — the commonest	The browser’s hourly_rate_cents, which no client sends → change_order_terms, authored only through the legacy proposal scope builder and copied in by the 00066 conversion (00066:525-535) → profiles.default_hourly_rate_cents, no writer anywhere → 0	Server-resolved on every path: studio_member_rates → none. Both dead legs cut, not preserved	studio_member_rates, in the People Room member profile. Blur-save, owner / admin only
Internal / no project	Does not exist — project_id is NOT NULL	nonbillable by short-circuit. No rate, no amount	—
Every kind	hourly_rate_cents is client-writable on non-services rows; rate_source does not exist	One SECURITY DEFINER resolver called by the classifier on every branch; rate_source CHECK ('authority', 'studio_member', 'none') printed in the ledger	Nobody edits an entry’s rate. The guard’s column list gains rate_source

HISTORY

Authority rates are already immutable and versioned; `studio_member_rates` is append-only with `effective_from` / `effective_to`, and the resolver takes the row covering the entry's `started_at`.

BACKFILL IS MANDATORY

Stranded rows are never promoted by a later agreement; W1 ships a one-off re-rate plus a pre-flight count of rows whose rate would change (synthesis said W0 — the plan moves it behind the resolver).

BLAST RADIUS

The classifier is 207 lines holding ceiling accrual, retainer gating, a project-level FOR UPDATE and three immutability raises, redefined twice since 00412 — gated by `run-sql-tests.sh -d supabase/tests/commercial`, not a type-check.

Unbilled to invoice. The lock already exists; the file does not.

QUESTION	VERDICT	EVIDENCE	SEATS
Unbilled → invoice	Keep the pull-through. Replace the client-side claim with claim_time_entries(p_invoice_id, p_entry_ids uuid[]) in W0 — today's compensating detach is a live money bug	use-time-tracking. ts:604-621	FS, unopposed
Approval / submit / lock-week	Not in v1 — unanimous. guard_invoiced_time_entry already forbids DELETE and freezes every priced column once invoice_id is set: that is the lock. A second state machine gives the bookkeeper two locks	00177:51-80	7 seats
What ships instead	One write widening: an owner / admin UPDATE + DELETE policy via is_org_admin_or_owner,	audit_logs 00021:226-241	FS, VET, OPS, BIL

QUESTION	VERDICT	EVIDENCE	SEATS
	plus updated_by and one audit row on any adjust or delete. An RLS policy, not a DEFINER RPC		
The compensating control	The member scope lens is the approval step — she looks at a hire’s week before she bills it. It ships with, never after, any widening of who can bill whom	LEAH-13	LEAH, binding
What the client sees	One priced line stays, plus a dated sub-table beneath the folio’s time line (date · hours · rate). The composer names the person on every row. The homeowner gets no staffing detail	buildTime LineDraft invoice- composer. ts:150- 161	CR vs LEAH + REP – split by surface

QUESTION	VERDICT	EVIDENCE	SEATS
Export set	(1) per-entry CSV from the fact view: Member, Date, Project, Client, Activity, Billable, Duration (min), Rate, Rate Source, Amount, Billing State, Invoiced, Invoice #. (2) per-client statement. (3) No QuickBooks integration — the bookkeeper wants a file on Friday	blob pattern qbo-export/in dex.ts:13 1-132 · promise VISION.md :54	5 for, 0 against
Sequencing	Pull the CSV forward — it needs only the fact view. But it must not ship on the drifted view, which is why the view repair moves to W0	view repair 00412:268 3-2685	VET forward, REP gate, FS W0
Naming	“Export week → Accounts” opens the invoice composer. Rename the ledger’s act so Export means a file	hours-ledger.ts x:380-400	CR-24

One new door per surface. No new route, no second hours surface.

PATH	SURFACE	TAPS	OFFLINE	WAVE	FILE
					Ta sk Sc he du le r — HT -2 8
A Live Activity ticking a lock-screen clock	iOS	—	—	struck	re ve rs es R6 9 — 3 se at s ag ai ns t, Ø fo r. HT -3 1

“Online only” — no wave adds a portal offline write path; the label is read from the plan’s absence of one, not a cited line

Eight waves. Every one ships unflagged, on the precedent time tracking set.

WAVE	SHIPS	EFFORT	DEPENDS ON	GATE	MIGRATIONS
W0	The live money bugs: atomic claim, the unbilled view repaired, the source CHECK widened once, the hook module made canonical, three dated governance entries	M · 3-5 d	—	new time_claim_atom_icity_test.sql green ; commercial suite green unchanged; admin - portal build ; live-mode render still claims	head+1...+3
W1	Rate truth: one resolver the classifier calls on every branch, rate_source on the row, studio_member_rates in the People Room, “rate pending” in place of a blank, a doorway on pending_aut	L · 6-10 d	W0	commercial suite green unchanged; new billing suite green ; backfill pre-flight count matches	head+4...+9

WAVE	SHIPS	EFFORT	DEPENDS ON	GATE	MIGRATIONS
	horization, and a backfill of stranded rows			post count	
W2	The four views: the scope lens, the project lens fixed, the member scope entered from the People Room, the owner/admin write widening with an audit row, the drip link and the help article made true, the auto- start disclosure and opt-out	M · 3-5 d	W0 – not W1	Okonk wo proje ct lens shows the house , not the opene r; a plain membe r sees no lens; an admin adjus t write s an audit row with both value sets; first hours e2e spec	head+10...+12

WAVE	SHIPS	EFFORT	DEPENDS ON	GATE	MIGRATIONS
W3	Capture with nothing in hand: the ⌘K verb at 5, a date field, a billable pill everywhere, the mobile form that can no longer save nothing, and activity that stops lying	M · 3-5 d	W0, W1	a 45-minute call logged in 5 interactions from ⌘K with no document open; the zero-tap path unregistered	head+13...+14
W4	Internal and admin time: a nullable project_id, a trigger-validated studio_id, four new RLS policies, and an “— internal —” group that is never folded into a project total	L · 6-10 d	W1, W3	RLS suite asserts the positive, cross-studio-negative and anti-aiming cases before the portal is touched	head+15...+19
W5	The bookkeeper’s Friday: a per-entry CSV, a composer that names the person	M · 3-5 d	W1, W2	a studio-scope CSV opens in a spreadsheet	none · head+20 reserved

WAVE	SHIPS	EFFORT	DEPENDS ON	GATE	MIGRATIONS
	on every row, a dated sub-table on the client's folio, a per-client statement, and "Export" meaning a file			t, one row per entry, every column populated	
W6	Patina Field: a LogTimeSheet with no visit, a stepper on the offer defaulted to active duration, a travel activity, "my hours this week", and a sibling outbox drainer	M · 3-5 d	W0 (HT-33), W1, W3	physical device, airplane mode: log → kill → reconnect → SELECT the row. Swift Data assertion: didResetIncompatibleStore == false	head+21...+22
W7	Rate cards bind to a person or a roster role instead of a string; a timer still running after 8 hours writes one quiet Record row; project_phases.estimat	M · 3-5 d	W1	a default two-role card created by the drafting room price as a new hire instead of	head+23...+25

WAVE	SHIPS	EFFORT	DEPENDS ON	GATE	MIGRATIONS
	ed_hours is ruled on and executed			stranding every entry	
All	Migration numbers are minted as origin/main head + n after git fetch, never written as a literal. Local head is eleven behind Strata. PostHog events land W1 (time_entry_logged, time_rate_unresolved), W3 (time_timer_started/_stopped), W5 (time_export_taken), W6 (time_entry_logged, field surfaces) — HT-27.	—	—	every render check runs with NEXT_PUBLIC_DESIGNER_PORTAL_DATA_DELETE; every data claim is a SELECT, never a screenshot	head+1...+25

Two co-critical paths of the same length. W4 and W7 are the only slack.

30–50

ENG-DAYS, ALL 8 WAVES

15–25

ENG-DAYS, CRITICAL PATH

18–28

WORKING DAYS, CALENDAR

2–3

CONCURRENT WORKTREES

PATH A W0 → W1 → W2 → W5 — stop the bleeding, make the number true, make it visible four ways, put it in a file.

PATH B W0 → W1 → W3 → W6 — the same 15–25 days, running beside it.

THE LONG ITEM W1’s classifier rewrite. Nothing shortens it; the commercial SQL suite is the gate and it is not negotiable.

STAGE	RUNS CONCURRENTLY	WORKTREES	SHARED-STATE OWNER	CONFLICT SURFACE	WHY
1	W0 alone	1	W0 owns supabase db reset and port 3000	None. W0 must land before anything forks, because it moves the hook module every later wave edits	—
2	W1 W2	2	W1 owns supabase db reset; W2 runs against its output or a port-isolated stack	Both touch hours-ledger.tsx. W2 owns that file; W1’s rate column lands as a follow-commit on the integration branch	The plan exists to enable this stage: six of nine seats put rate truth ahead of visibility; the

STAGE	RUNS CONCURRENTLY	WORKTREES	SHARED-STATE OWNER	CONFLICT SURFACE	WHY
					customer puts the member lens first and asked not to have it gated behind the rate rewrite
3	W3 W5	2	W3 owns supabase db reset	W3 owns the command bar, the log strip, the mobile sheets and the add row; W5 owns the composer, the billing lib and the client portal. No overlap	—
4	W4 W6 W7	3	W4 owns supabase db reset; W6 owns the physical device; W7 owns the edge-function local serve	W4 is policies; W6 is Swift only; W7 is the agreement part editor plus an edge function. No overlap	—

Twenty-three dispositions.

№	THING	PATH:LINE	WAVE	GATE BEFORE DELETING
1	The compensating detach in useClaimTime Entries — a live money bug	use-time-tracking.ts:616-619	W0	claim_time_entries lands first
2	project_unbilled_time's INNER JOIN on profiles	00412:2683-2685 · hazard 00555:3024-3026	W0	Keep the view name — three callers and a SQL test read it
3	The view's change_order_terms → default_hourly_rate_centers → 0 chain, both legs	00412:2676-2682 (includes both rate legs, formerly split with №9)	W0	With №2, one redefinition

№	THING	PATH:LINE	WAVE	GATE BEFORE DELETING
	te_cents' as a rate leg	use-scope-builder.ts:945-950 (writes proposal_change_order_terms, copied to projects.change_order_terms by 00066:525-535)		
9	The profiles.default_hourly_rate_cents fallback (its view legs are removed with №3, in W0)	00412:2678,2681 · column declared 00177:89, view legs 00177:111, 118	W1	The column drops a cycle after the view rewrite is live
10	The pending_authorization dead-end badge and the silently-null provenance label	hours-ledger.tsx:683-700 (pill) · hours-ledger.tsx:184 (state) · authority-hours.ts:74-88	W1	Replaced by a doorway and “rate pending”
11	The live drip link ? sheet=hours, which lands on a bare Desk	copy-deck.md:357,379,627 vs desk-doorway.tsx:19,41	W2	One character
12	The help article’s two studio-scope sentences	.../wave-1/15-hours.md:9,15	W2	Made true, not deleted; pushed to Sanity
13	Gap-matrix rows BIL-04 and BIL-08	portal-vs-desk-feature-gap-matrix-v2.md:189,193 (both copies: docs/desig	W2	Reopen BIL-08 as rate-display drift, not absence; edit both copies

№	THING	PATH:LINE	WAVE	GATE BEFORE DELETING
		n/the-document/and docs/product/)		
14	The 23505 toast branch in useStartTime r	use-time-tracking.ts:480-484	W3	start_timer lands first, returning both rows
15	The implicit billable: input.billable ?? true	use-time-tracking.ts:320 (the default) · :467 (useStartTimer — sets billable only when provided, no default)	W3	Every surface carries the control first; then a missing value is a caught bug
16	The log strip's 'design' activity default	log-strip.tsx:36	W3	Replaced by “activity not set”, never by a required tap
17	CaptureWidgets/ and CaptureShareExtension/ — empty directories shaped like targets	absent from Capture.xcodeproj/project.pbxproj:1140-1224	W6	No third state: either targets or gone
18	useUpdatePhaseEstimates — 0 callers, so phase estimates are a budget you can read and never set	use-time-tracking.ts:791	W7	HT-39 first — re-home or drop, not both-and-neither
19	The shipped default rate-card label “Principal designer”	service-agreement-drafting-room.tsx:238 · role CHECK	W7	The person/role binding lands first

NO	THING	PATH:LINE	WAVE	GATE BEFORE DELETING
20	The draft's DEFINER rollup, its studio_id-keyed RLS policy, and every new call site on user_is_org_member	architecture-draft.md:29,50,51 · 00317:15-18 · 00021:484-517	—	Dropped from the plan outright, not built then removed
21	Stale line citations throughout the architecture draft	draft :3,7,8,63,97 point at 00412; head is 00578:2599	W0	The draft is an input, not a record
22	useStudioTimeReport — not deleted	use-time-tracking.ts:689-781	—	HT-37 contested: 8 seats delete, feasibility calls deletion “the single biggest avoidable cost in the program”. This plan wires it in W2
23	The stale spec pointer in the Document's CLAUDE.md	per briefing §2	W0	Not re-verified by any seat — verify the pointer exists before fixing it

NOT ON THIS SHEET

Synthesis §8’s nudge-rule and Live-Activity rows are rulings, not deletions — they appear as HT-34 and HT-31 on sheet 14, and the Live Activity strike also shows on sheet 09.

Eleven risks. Every mitigation is a named gate, not a promise to be careful.

№	RISK	SEVERITY	MITIGATION
1	The classifier rewrite silently re-rates history — 207 lines holding ceiling accrual, retainer gating, a project-level FOR UPDATE and three immutability raises, redefined twice already	highest	Resolver is a separate function; classifier gets one call plus three branch fixes, raises copied verbatim; gate is run-sql-tests.sh -d supabase/tests/commercial; backfill is its own migration, pre-flight count must match post
2	Nullable project_id writes internal time and then hides it — all eight policies resolve through project_id, four through projects p, four through is_project	high	The four new policies land in the same migration set as the DROP NOT NULL; the RLS suite asserts positive, cross-studio-negative

ID		RISK	SEVERITY	MITIGATION
3		_team_member(project_id)		and anti-aiming before the portal is touched
		studio_id becomes a cross-studio write hole — a member could aim it at any organization	high	The 00317 anti-aiming guard is replicated as a trigger, not assumed from the CHECK, and asserted per role in the RLS suite
	4	Migration-number collision across three concurrent worktrees — six-plus renumber incidents in this repo	medium	Reserved ranges per wave, provisional until merge and re-checked against the integration tip before each merge; numbers are written as head+n, never as literals
5		The activity CHECK is inline and unnamed (00198:27-29) — the 00545 precedent cost 232	low	source was already named project_time_entries_source_ck by 00545:147-148; only the

№	RISK	SEVERITY	MITIGATION
	lines of archaeology finding source's name		activity widening (W6) needs 00545's name- discovery form
6	A stale packages/s upabase dist/ ships a working source and a broken bundle — the proposalTi erVisibili ty incident class, and W0 moves the hook module into that package	medium	turbo build -- filter=@pa tina/supab ase before any consumer type- check; admin- portal build as the wave gate; portal deploys only through ./infra/de ploy- portal.sh
7	The SwiftData schema change destroys queued, unsynced billable hours — the store's open ladder sets aside an incompatible store and retries	medium	W6 asserts didResetIn compatible Store == false against a previous- schema store — a green capture- gate.sh does not cover this
8	Narrowing time_entr ies_studio_ read is a	medium	Isolated to its own reserved migration

№		RISK	SEVERITY	MITIGATION
		widening-in-reverse, landing mid-program if HT-10 is ruled “narrow”		(head+12) with a per-role SQL test, and the only change in it, so it reverts without touching the lens
9		A green gate that proves nothing — turbo silently skips workspaces with no such script, and the portal’s mock fallback returns mock data on any thrown error, including an RLS denial	medium	Every render check runs NEXT_PUBLIC_DESIGNER_PORTAL_DATA_MODE=live; every data claim is a SELECT, never a screenshot; per-wave gates are named explicitly
10		The published promise outruns the build again — a live drip email and a shipped help article already describe a studio-wide ledger that does not exist	low	Both are W2 ship-gate items, not follow-ups: the article is true or the sentences are gone before the wave is called shipped
11		R19’s consent	low · trust, not code	W2 ships the

ID		RISK	SEVERITY	MITIGATION
		evidence is one person, who is also the owner — and the ruling is about to govern an employee's documents		disclosure band and the per-member opt-out as ship-gate items, and its member scope defaults to aggregate with notes behind an explicit detail act

Forty questions. Four must be ruled before the plan can be sequenced: HT-1 (W1), HT-10 & HT-37 (W2), HT-4 (W7 + W1's backfill).

ID	TOUCHES	THE QUESTION	PANEL RECOMMENDATION	PANEL
HT-1	new	Does the server own hourly_rate_cents on every project kind, overriding any value a client sends?	Yes. One resolver, every branch; clients stop sending an opinion	9 · 0
HT-2	new	Are change_order_terms and profiles.default_hourly_rate_cents cut from the chain, or kept as tiers 2 and 3?	Cut both. One has only a legacy writer; the other has no writer at all	4 · 1 (LEAH keeps tier 3)
HT-3	new	Does a per-member studio rate exist, and is the People Room member profile its home?	Yes, and yes. Blur-save, owner / admin only	6 · 0
HT-4	new	Does a rate-card row bind to a person or roster role instead of a free-text label?	Yes. Do not build a resolver on a string match	1 seat (CR) · 0
HT-5	new	Is claim_time_e	Yes. Atomic claim; delete the	1 · 0, unopposed

ID	TOUCHES	THE QUESTION	PANEL RECOMMENDATION	PANEL
		entries a Wave 0 item?	compensating detach	
HT-6	new	Does the project_unbilled_time repair move to Wave 0?	Yes. It is a silent money understatement, not a cleanup	6 · 0 (draft said W6)
HT-7	R19	May a Field, widget or intent surface ever own the single global running-timer slot?	No, not in v1. Elapsed-since-arrival pre-fill feels like a timer without owning the slot	unanimous
HT-8	R77	Does the Hours ledger grow an admin-gated scope lens — mine, member, project, studio — in the same sheet?	Yes. One sheet, no page, no tab bar, no leaderboard	8 · 0
HT-9	new	Does the project lens stop ANDing user_id?	Yes. It answers the wrong question with a plausible number	3 · 0, unopposed
HT-10	new	Is time_entries_studio_read narrowed to owner/admin, or does a plain member keep the teammate read 00316 already grants?	Decide explicitly. Panel leans narrow to owner/admin and keep the project-team read	CR narrow; FS flags the cost
HT-11	new	Does billable become an explicit	Yes to both. billable is not a guarded column — this ships with no server change	6 · 0

ID	TOUCHES	THE QUESTION	PANEL RECOMMENDATION	PANEL
		control at every capture surface, and does the implicit ?? true go?		
HT-12	R19	Does one server-owned rule resolve billable for every source, and is the reason printed on the row?	Yes. Keep fail-closed; make it consistent; print “non-billable · no agreement”	3 · 0
HT-13	new	Is backdating allowed, and how far?	Yes — a date field on the add row and the ⌘K verb, defaulting to the paged week. Kody sets the bound	2 · 0, unopposed
HT-14	new	Does the mobile manual form get a project picker, or is it disabled when nothing is held?	Either — but never a silent success	3 · 0
HT-15	new	May project_id be NULL for non-billable internal time, rather than a sentinel “Internal” project?	Yes — and reprice it M → L. Four new policies plus an anti-aiming trigger	5 · 0
HT-16	D10	Is D10 enforced on Patina Field rather than amended?	Enforce. D10 binds every surface that proposes a duration. A stepper on the offer, defaulted to active duration	4 · 0

ID	TOUCHES	THE QUESTION	PANEL RECOMMENDATION	PANEL
HT-17	R64	Does the abandonment bound bind any clock-derived duration, and does it ever fire on cumulative idle?	Scope: yes, extend the wording, keep the 30-minute number. Cumulative: not yet — instrument the ratio first	CR extend · MOB gate · VET instrument
HT-18	new	Does Field get a LogTimeSheet reachable with no visit — a 7th Browse tile and the expanded companion state?	Yes. The collapsed strip carries one action and it is “End visit”; Invariant V holds	6 · 0
HT-19	new	Does the activity CHECK gain a travel / drive value?	Yes — and it must be reachable before the truck moves, not after	1 · 0, unopposed
HT-20	new	Is per-entry CSV the export, pulled forward rather than last?	Yes, from the fact view, on the qbo-export blob pattern — gated on HT-6	5 · 0
HT-21	new	Does the client’s invoice gain a dated sub-table, and does the composer name the person?	Composer: yes, name the person. Client line: one priced line plus a dated sub-table	CR vs LEAH + REP
HT-22	new	Does an owner/admin UPDATE + DELETE policy	Yes — exactly one write widening, via is_org_admin_or_owner, audited	4 · 0

ID	TOUCHES	THE QUESTION	PANEL RECOMMENDATION	PANEL
		exist on time entries?		
HT-23	new	Do edits leave a trace — updated_by plus an audit row?	Yes. Nearly free at the boundary being built anyway, expensive to retrofit	2 · 0
HT-24	D10	Is activity recorded rather than defaulted — and is it ever made required?	Recorded, never required. Print “activity not set” honestly; the zero-tap path keeps working	2 seats (FS, CR) · 0
HT-25	new	May a studio member log time on a project they are not rostered to — auto-roster on first log, or is a roster seat required?	Decide explicitly. The requirement as written currently fails, with a silent RLS refusal	1 · 0, unopposed
HT-26	new	Does pending_auth_ORIZATION become a doorway, and does an unresolved rate print “rate pending” instead of a blank?	Yes to both. Wire the badge to the already-shipped authority band	2 · 0
HT-27	new	Do the PostHog events ship before any iOS extension wave?	Yes. The widget decision must rest on time_entry_logged by surface, not on taste	4 · 0
HT-28	new	Does the Siri / App-Intent path ship	No. Either the intent attempts the network with the outbox as	FS blocker

ID	TOUCHES	THE QUESTION	PANEL RECOMMENDATION	PANEL
		before a background drain exists?	fallback, or a background task ships first	
HT-29	§6	Is the Desk hours card a studio week total for admins, or act-bearing only?	Act-bearing or nothing — unbilled with “Bill it”, or a timer still running from yesterday	CR + OPS vs LEAH
HT-30	§6	Is §6 amended for this program, or strengthened?	Strengthened: a total is permitted as the front matter of the rows that produced it; a total with no rows beneath it is a dashboard	CR; FS compatible
HT-31	R69	Does a Live Activity ever tick a running clock on the lock screen?	Affirm R69, strike the Live Activity. If one ever ships: minute resolution, no elapsed animation	0 · 3
HT-32	D9	Is D9 amended to “capture belongs wherever the work happened; review belongs only in the drawer ledger, never a page”?	Amend. The current wording is too narrow to authorise ⌘K and Field capture, and too weak to forbid the /hours page someone will propose	CR amend; FS carve-out
HT-33	§1	Is Patina Field recorded as The Document off-desk rather than a fourth surface?	Yes — one dated VISION-DECISIONS entry, zero code. Without it a literal §8 test parks W6	1 · 0, unopposed
HT-34	§4/§6	Does an unlogged-day	Ship rule (a) only — a timer over 8 h writes one quiet Record row,	4 · 1 · daily: 0 for

ID	TOUCHES	THE QUESTION	PANEL RECOMMENDATION	PANEL
		nudge exist at all?	no push, no email. Rule (b) opt-in, weekly at most, dark by default, never daily	
HT-35	R19	Is auto-start disclosed to a new member, and may a member opt out?	Disclose: yes, a one-time dismissible sentence on the first document open. Opt-out: yes, per member, default on, on their own profile	2 · 0
HT-36	R77	Does the member scope default to aggregate, with free-text notes behind an explicit detail act?	Yes. The rollup's return shape is frozen at buckets, minutes and money — never notes — asserted per role	2 · 0
HT-37	new	useStudioTimeReport: delete or wire?	Panel splits — Kody rules. This plan wires it; if he rules delete, the INVOKER replacement lands in head+12 and W2 moves to the low end of L	8 delete · 1 wire
HT-38	new	Is the studio rollup SECURITY DEFINER or INVOKER?	INVOKER. The draft's stated reason for DEFINER is false — the rows are already co-member-readable — and its signature has no p_studio_id, so the promised assert cannot be written	FS decisive; draft says DEFINER
HT-39	new	project_phases.estimated_hours: re-home or drop?	Rule it either way; do not leave it. A second estimate column already feeds the ledger's live readout	FS, CR, LEAH, REP split
HT-40	new	Is the billing-state chip a §6 "badge"?	Keep it as built. A 1px-bordered text pill with no fill is a table's state	1 · 0, unopposed

column; add no colour-coding

Three things are asked of you.

APPROVE THE SHAPE	One server-owned answer for rate and billable; one sheet with one admin-gated lens; one new door per surface and a date field; a CSV. No new route, no dashboard, no approval workflow, no daily nudge.
RULE THE SHEET	HT-1 ... HT-40 — four gate the first line of code (HT-1, HT-4, HT-10, HT-37) and three decide whether the first hire trusts the clock (HT-30, HT-35, HT-36).
GREEN-LIGHT W0	Three to five days: the atomic claim, the unbilled view, the source CHECK, the hook module made canonical (droppable if the band runs long), and three dated governance entries. It depends on nothing and blocks everything.

RULING	GATES	COST OF NOT RULING IT
HT-1	The first line of SQL in W1	A member prices their own hour on the commonest project kind
HT-4	W7, and the cause behind W1's backfill	A default two-role rate card strands every entry on a services project
HT-10	W2's head+12	The permission model in this deck is cosmetic
HT-37	W2's band: M, or the low end of L	Either rebuilding what exists, or a client-side whole-studio aggregation later reviewers must re-audit

Sources, seats, date.

PANEL	artifacts/hour-tracking-2026-09-11/panel/ — memo-pm-studio-ops.md, memo-pm-billing.md, memo-pm-timetrack-veteran.md, memo-ux-mobile.md, memo-ux-web.md, memo-ux-reporting.md, memo-leah.md, memo-feasibility.md, memo-critic.md
SYNTHESIS	artifacts/hour-tracking-2026-09-11/synthesis.md — §1 verdict, §3 friction, §4 the four views, §5 rate truth, §6 money hand-off, §7 ruling sheet, §8 deletions, §9 dissents
ARCHITECTURE	artifacts/hour-tracking-2026-09-11/architecture.md — §0 binding rules, §1-§8 waves, §9 critical path, §10 effort, §11 risks, §12 not in v1, §13 deletions, §14 rulings by wave
BRIEFING	briefing/panel-brief-common.md, briefing/current-state.md §0, §2 and §3 (surface capability tables), briefing/rulings-digest.md, briefing/architecture-draft.md (superseded)
SEATS	Nine. Studio-ops PM · billing PM · time-tracking veteran PM · iOS UX · web UX · reporting and information design · the customer · feasibility (senior engineer) · critic (vision and rulings).
SEAT KEY	FS = feasibility · CR = critic · WEB / MOB / REP = the UX seats · OPS / BIL / VET = the PMs · LEAH = the customer.
FINDINGS COUNT	218 (synthesis.md:3), carried without independent re-derivation. Numbered seat-memo rows alone sum to 203 (30+45+25+12+16+27+17+15+16); with feasibility's seven per-wave effort rows, 210; with the critic's separate C1-C29 series counted alongside CRITIC-1...30, 239.
TYPESET TO	docs/design/house-sheet/SPEC.md §A as amended by §F. Playfair Display, Inter, DM Mono. No shadow, no reveal motion, no truncation. Known deviations, not corrected: page measure 1240px (§A4: 1100px — narrowing would worsen sheet-table clipping); block gaps of 2/4/6/10/20px (§A4: a 12/24 module); .t-head used beyond running heads, for verdict keys, count labels, annotation keys and in-cell labels (§A3); the mark dial .m at 11px with border-radius: 50% (§A4: 50% permitted only for the 7px mark dot); .slide padding-block 56/140px (§A4: off the 12/24 module); this entry and "Findings count" exceed one line, kept as reference rather than prose.
TITLE FROM	margin-groups.ts:11-13 — time is not a margin item the margin prints: it is the studio's own clock
PATHS	Citations are relative to apps/designer-portal/src/ (TS/TSX) and supabase/migrations/ (five-digit numbers), on origin/main. Swift under apps/mobile/Capture/; edge functions under supabase/functions/; docs and artifacts from the repo root.
